

- Consult with Medical Affairs, Health Economics, Value & Access (HEVA), and Real World Evidence Investigators to ensure timely execution to meet evidence needs
- Design and conduct analysis for network meta-analysis (NMA) and indirect treatment comparisons (ITC), ensure compliance with best scientific practices and create study reports
- Provide statistical expertise to effectively communicate the findings within cross-functional teams including Medical Affairs, HEVA, Clinical Development, Biostatistics, and local affiliates.
- Draft or review analytic results for all reports and publications
- Ensure validation as per SOP of secondary data analysis protocol
- Create statistical sections for study synopses, protocols, or scientific publications
- Develop or review statistical inputs and results in submitted materials to external stakeholders, including scientific congress, peer-reviewed journals, regulatory/HTA submissions, core value dossiers etc.
- Advise on the methodological decisions and their efficiency to support findings from HEOR studies
- Analyze, manage and optimize related databases
- Maintain documentation for data, programs, and results
- Manage external vendors for the delivery of study protocol, statistical outputs and study reports
- Defend statistical positions in interaction with other internal functions or external stakeholders
